Map projection

Marco (eds.). Open Innovation for Europe. FOSS4G Europe 2015. Geomatics Workbooks. Vol. 12. Como, Italy: Polytechnic University of Milan. pp. 697–700. ISSN 1591-092X

In cartography, a map projection is any of a broad set of transformations employed to represent the curved two-dimensional surface of a globe on a plane. In a map projection, coordinates, often expressed as latitude and longitude, of locations from the surface of the globe are transformed to coordinates on a plane.

Projection is a necessary step in creating a two-dimensional map and is one of the essential elements of cartography.

All projections of a sphere on a plane necessarily distort the surface in some way. Depending on the purpose of the map, some distortions are acceptable and others are not; therefore, different map projections exist in order to preserve some properties of the sphere-like body at the expense of other properties. The study of map projections is primarily about the...

Prime number

Space. Golden Press. p. 16. OCLC 6975809. Leff, Lawrence S. (2000). Math Workbook for the SAT I. Barron's Educational Series. p. 360. ISBN 978-0-7641-0768-9

A prime number (or a prime) is a natural number greater than 1 that is not a product of two smaller natural numbers. A natural number greater than 1 that is not prime is called a composite number. For example, 5 is prime because the only ways of writing it as a product, 1×5 or 5×1 , involve 5 itself. However, 4 is composite because it is a product (2×2) in which both numbers are smaller than 4. Primes are central in number theory because of the fundamental theorem of arithmetic: every natural number greater than 1 is either a prime itself or can be factorized as a product of

primes that is unique up to their order.

The property of being prime is called primality. A simple but slow method of checking the primality of a given number

General relativity

University Press, OCLC 7644624 Moore, Thomas A (2012), A General Relativity Workbook, University Science Books, ISBN 978-1-891389-82-5 Schutz, B. F. (2009)

General relativity, also known as the general theory of relativity, and as Einstein's theory of gravity, is the geometric theory of gravitation published by Albert Einstein in 1915 and is the accepted description of gravitation in modern physics. General relativity generalizes special relativity and refines Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space and time, or four-dimensional spacetime. In particular, the curvature of spacetime is directly related to the energy, momentum and stress of whatever is present, including matter and radiation. The relation is specified by the Einstein field equations, a system of second-order partial differential equations.

Newton's law of universal gravitation, which describes gravity in classical...

Jeffrey Epstein

Servitude—Principles, Skills and Tools and Training with Miss Abernathy: A Workbook for Erotic Slaves and Their Owners. A former employee told the police that

Jeffrey Edward Epstein (EP-steen; January 20, 1953 – August 10, 2019) was an American financier and child sex offender who victimized hundreds of teenage girls. Born and raised in New York City, Epstein began his professional career as a teacher at the Dalton School. After his dismissal from the school in 1976, he entered the banking and finance sector, working at Bear Stearns in various roles before starting his own firm. Epstein cultivated an elite social circle and procured many women and children whom he and his associates sexually abused.

In 2005, police in Palm Beach, Florida, began investigating Epstein after a parent reported that he had sexually abused her 14-year-old daughter. Federal officials identified 36 girls, some as young as 14 years old, whom Epstein had allegedly sexually...
