The Mathematical Theory of Communication Claude E Shannon,Warren Weaver,1998-09-01 Scientific knowledge grows at a phenomenal pace--but few books have had as lasting an impact or played as important a role in our modern world as *The Mathematical Theory of Communication*, published originally as a paper on communication theory more than fifty years ago. Republished in book form shortly thereafter, it has since gone through four hardcover and sixteen paperback printings. It is a revolutionary work, astounding in its foresight and contemporaneity. The University of Illinois Press is pleased and honored to issue this commemorative reprinting of a classic.

Build Your Own Romantic Comedy Lana Schwartz,2020-03-17 "A rollicking, meta, Choose Your Own Adventure novel for adults whose notions of romance are skewed and cracked from a lifelong diet of Meg Ryan movies." —Vulture Get ready to relax with your favorite romantic comedy of all time—the one you create! Instead of turning on the latest cheesy rom-com for a simple, mood-boosting love story, put yourself in the director's chair with *Build Your Own Romantic Comedy*. First, open the book and pick your heroine. Will she be a high-powered business lady with no time for love? Or a quirky bakery owner? Just make your choice and read how the magic unfolds. When it's time to meet your man, do you prefer a hunky prince, a hunky executive, or a hunky nemesis? Each choice will take you down a totally different path that all somehow end up making a charmingly predictable romance. Choice by hilarious choice, you'll pick from classic rom-com elements like: Sassy best friends Romantic date montages A makeover, obviously Dramatic but easily solved misunderstandings Make your way closer and closer to the big payoff—the picture-perfect, most romantic final kiss ever. And when you've savored that last bit of fun, romantic goodness, don't be glum. Turn back to page one and start a new love story. With over 100 possible stories, the happily-ever-afters never have to stop.

From the Fulda Gap to Kuwait Stephen P. Gehring,1998 CMH Publication 70-56-1. This study describes how the United States Army, Europe (USAREUR), under the command of General Crosbie E. Saint, supported the armed response of the United States and the United Nations to Iraq's August 1990 invasion of Kuwait at the very time it was managing a fundamental transition in its fifty-year history of defending Central Europe. Discusses the complicated planning for the deployment and the rapid-fire implementation.

Climate Change and Water Intergovernmental Panel on Climate Change / Working Group Technical Support Unit,2008

The Technical Paper addresses the issue of freshwater. Sealevel rise is dealt with only insofar as it can lead to impacts on freshwater in coastal areas and beyond. Climate, freshwater, biophysical and socio-economic systems are interconnected in complex ways. Hence, a change in any one of these can induce a change in any other. Freshwater-related issues are critical in determining key regional and sectoral vulnerabilities. Therefore, the relationship between climate change and freshwater resources is of primary concern to human society and also has implications for all living species. -- page vii.

General Relativity for Mathematicians R.K. Sachs,H.-H. Wu,2012-12-06 This is a book about physics, written for mathematicians. The readers we have in mind can be roughly described as those who: 1. are mathematics graduate students with some knowledge of global differential geometry 2. have had the equivalent of freshman physics, and find popular accounts of astrophysics and cosmology interesting 3. appreciate mathematical clarity, but are willing to accept physical motivations for the mathematics in place of mathematical ones 4. are willing to spend time and effort mastering certain technical details, such as those in Section 1. 1. Each book disappoints some readers. This one will disappoint: 1. physicists who want to use this book as a first course on differential geometry 2. mathematicians who think Lorentzian manifolds are wholly similar to Riemannian ones, or that, given a sufficiently good mathematical background, the essentials of a subject like cosmology can be learned without some hard work on boring details 3. those who believe vague philosophical arguments have more than historical and heuristic significance, that general relativity should somehow be proved, or that axiomatization of this subject is useful 4. those who want an encyclopedic treatment (the books by Hawking-Ellis [1], Penrose [1], Weinberg [1], and Misner-Thorne-Wheeler [1] go further into the subject than we do; see also the survey article, Sachs-Wu [1]). 5. mathematicians who want to learn quantum physics or unified field theory (unfortunately, quantum physics texts all seem either to be for physicists, or merely concerned with formal mathematics).

The Seed and the Sower Laurens Van Der Post,2011-08-31 What follows is the story of two British officers whose spirit the Japanese try to break. Yet out of all the violence and misery strange bonds are forged between prisoners - and their gaolers. In a battle for survival that becomes a battle of contrasting wills and philosophies as the intensity of the men's

relationships develop.

The Numbers Behind NUMB3RS Keith Devlin, Gary Lorden, 2007-08-28 The companion to the hit CBS crime series Numb3rs presents the fascinating way mathematics is used to fight real-life crime Using the popular CBS prime-time TV crime series Numb3rs as a springboard, Keith Devlin (known to millions of NPR listeners as the Math Guy on NPR's Weekend Edition with Scott Simon) and Gary Lorden (the principal math advisor to Numb3rs) explain real-life mathematical techniques used by the FBI and other law enforcement agencies to catch and convict criminals. From forensics to counterterrorism, the Riemann hypothesis to image enhancement, solving murders to beating casinos, Devlin and Lorden present compelling cases that illustrate how advanced mathematics can be used in state-of-the-art criminal investigations.

The Fiscal Administration of Egypt in the Early Islamic Period Kosei Morimoto, 1981

Modeling and Simulation of Aerospace Vehicle Dynamics Peter H. Zipfel, 2000 A textbook for an advanced undergraduate course in which Zipfel (aerospace engineering, U. of Florida) introduces the fundamentals of an approach to, or step in, design that has become a field in and of itself. The first part assumes an introductory course in dynamics, and the second some specialized knowledge in subsystem technologies. Practicing engineers in the aerospace industry, he suggests, should be able to cover the material without a tutor. Rather than include a disk, he has made supplementary material available on the Internet. Annotation copyrighted by Book News, Inc., Portland, OR

Concept Development and the Development of Word Meaning T. B. Seiler, W. Wannemacher, 2012-12-06 This volume owes its existence to many different sources and influences. It is based on a meeting that took place from April 30 to May 2, 1982 at the University of Technology in Darmstadt. The idea for that meeting came while we were elaborating a research program on concept development and the development of word meaning; we were inspired by Werner Deutsch of the Max Planck Institute for Psycholinguistics in Nijmegen (The Netherlands) and by the Volkswagen Foundation in Hannover (Federal Republic of Germany) to organize an international conference on the same topic. We set out to invite a long list of colleagues, and we only regret that not all of them were able to attend. This volume should not be viewed as the proceedings of that conference. On the one hand, it does not include all of the papers presented there, and on the other hand, some of our colleagues who were unable to attend were nevertheless willing to write contributions. Furthermore, some who did present papers at the conference revised and reformulated them or even submitted completely new ones for this book. We feel, however, that in the end we have arranged a valuable collection of work in the theory and research of a field that has occupied not only psychologists and linguists, but also philosophers, anthropologists, and many others for a long time.

Conceptual Design of Chemical Processes James Merrill Douglas,1988 This text explains the concepts behind process design. It uses a case study approach, guiding readers through realistic design problems, and referring back to these cases at the end of each chapter. Throughout, the author uses shortcut techniques that allow engineers to obtain the whole focus for a design in a very short period (generally less than two days).
