Radiometric Methods of Dating Fossils Kimberly Wylie, 2006-07-16 Seminar paper from the year 2004 in the subject Archaeology, University of Phoenix, language: English, abstract: Today, most of the methods utilized for chronometric dating of fossils are radiometric. Radiometric dating, in general, refers to the dating of material by using the known rate at which certain radioactive isotopes decay, or at what rate there are collective changes due to radioactivity. Even though isotopes of an element can be different when it comes to atomic mass, the atomic number of the isotope is always the same. Radioactive elements decay at unique rates, dependant on the isotope. This rate of decay is known as half-lives, it is the time necessary for 1/2 of the atoms to decay in a particular element. The decay follows a geometric scale, in that in the first half-life of an element, 1/2 of the atoms decay, yet in the second half-life, 1/2 of those remaining decay, meaning a 1/4 of the original atoms decay, and so forth. By measuring this decay, and knowing the half life of an element, scientists can date a sample.

Multilayer Thin Films Sukumar Basu, 2020-01-15 This book, Multilayer Thin Films-Versatile Applications for Materials Engineering, includes thirteen chapters related to the preparations, characterizations, and applications in the modern research of materials engineering. The evaluation of nanomaterials in the form of different shapes, sizes, and volumes needed for utilization in different kinds of gadgets and devices. Since the recently developed two-dimensional carbon materials are proving to be immensely important for new configurations in the miniature scale in the modern technology, it is imperative to innovate various atomic and molecular arrangements for the modifications of structural properties. Of late, graphene and graphene-related derivatives have been proven as the most versatile two-dimensional nanomaterials with superb mechanical, electrical, electronic, optical, and magnetic properties. To understand the in-depth technology, an effort has been made to explain the basics of nano dimensional materials. The importance of nano particles in various aspects of nano technology is clearly indicated. There is more than one chapter describing the use of nanomaterials as sensors. In this volume, an effort has been made to clarify the use of such materials from non-conductor to highly conducting species. It is expected that this book will be useful to the postgraduate and research students as this is a multidisciplinary subject.

Distilling the results of many years' experience in ferroalloys, Michael Gasik has assembled contributions from the worlds' foremost experts. The work is therefore a unique source for scientists, engineers and university students, exploring in depth an area which is one of the most versatile and increasingly used fields within modern metallurgy. All-in-one source for the major ferroalloys and their metallurgical processing technologies, cutting research time otherwise spent digging through old handbooks or review articles. In-depth discussion of the C, Si, Al-reduction, groups II-VIII of the periodic table, supporting analysis of metallurgical processing. Contemporary coverage includes environment and energy saving issues.

Taxonomy of Australian Mammals Stephen Jackson, Colin Groves, 2015-06-16 *Taxonomy of Australian Mammals* utilises the latest morphometric and genetic research to develop the most up to date and comprehensive revision of the taxonomy of Australian mammals undertaken to date. It proposes significant changes to the higher ranks of a number of groups and recognises several genera and species that have only very recently been identified as distinct. This easy to use reference also includes a complete listing of all species, subspecies and synonyms for all of Australia's mammals, both native and introduced as well as terrestrial and marine. This book lays a foundation for future taxonomic work and identifies areas where taxonomic studies should be targeted, not only at the species and subspecies level but also broader phylogenetic relationships. This work will be an essential reference for students, scientists, wildlife managers and those interested in the science of taxonomy.

Designing the New American University Michael M. Crow,William B. Dabars,2015-03-15 A radical blueprint for reinventing American higher education. America's research universities consistently dominate global rankings but may be entrenched in a model that no longer accomplishes their purposes. With their multiple roles of discovery, teaching, and public service, these institutions represent the gold standard in American higher education, but their evolution since the nineteenth century has been only incremental. The need for a new and complementary model that offers broader accessibility to an academic platform underpinned by knowledge production is critical to our well-being and economic competitiveness. Michael M. Crow, president of Arizona State University and an outspoken advocate for reinventing the public research university, conceived the New American University model when he moved from Columbia University to Arizona State in 2002. Following a comprehensive reconceptualization spanning more than a decade, ASU has emerged as an international academic and research powerhouse that serves as the foundational prototype for the new model. Crow has led the

transformation of ASU into an egalitarian institution committed to academic excellence, inclusiveness to a broad demographic, and maximum societal impact. In *Designing the New American University*, Crow and coauthor William B. Dabars—a historian whose research focus is the American research university—examine the emergence of this set of institutions and the imperative for the new model, the tenets of which may be adapted by colleges and universities, both public and private. Through institutional innovation, say Crow and Dabars, universities are apt to realize unique and differentiated identities, which maximize their potential to generate the ideas, products, and processes that impact quality of life, standard of living, and national economic competitiveness. *Designing the New American University* will ignite a national discussion about the future evolution of the American research university.

Managing IT for Innovation Mitsuru Kodama, 2021-07-27 With recent advances in IT in areas such as AI and IoT, collaboration systems such as business chat, cloud services, conferencing systems, and unified communications are rapidly becoming widely used as new IT applications in global corporations' strategic activities. Through in-depth longitudinal studies of global corporations, the book presents a new theoretical framework and implications for IT-enabled dynamic capabilities using collaboration systems from the perspective of micro strategy theory and organization theory. The content of the book is based on longitudinal analyses that employ various qualitative research methods including ethnography, participant observation, action research and in-depth case studies of global corporations in Europe, the United States and Asia that actively use collaboration systems. It presents a new concept of micro dynamism whereby dynamic IT-enabled knowledge communities such as IT-enabled communities of practice and IT-enabled strategic communities create IT-enabled dynamic capabilities through the integration of four research streams - an information systems view, micro strategy view, micro organization view and knowledge-based view. The book demonstrates that collaboration systems create, maintain and develop IT-enabled knowledge communities within companies and are strategic IT applications for enhancing the competitiveness of companies in the ongoing creation of new innovation and the realization of sustainable growth in a 21st century knowledge-based society. This book is primarily written for academics, researchers and graduate students, but will also offer practical implications for business leaders and managers. Its use is anticipated not only in business and management schools, graduate schools and university education environments around the world but also in the broad business environment including management and leadership development training.
