*Democracy and Education* John Dewey, 1916 . *Renewal of Life by Transmission*. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word control in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

Forever Today Deborah Wearing, 2011-07-31 Clive Wearing has one of the most extreme cases of amnesia ever known. In 1985, a virus completely destroyed a part of his brain essential for memory, leaving him trapped in a limbo of the constant present. Every conscious moment is for him as if he has just come round from a long coma, an endlessly repeating loop of awakening. A brilliant conductor and BBC music producer, Clive was at the height of his success when the illness struck. As damaged as Clive was, the musical part of his brain seemed unaffected, as was his passionate love for Deborah, his wife. For seven years he was kept in the London hospital where the ambulance first dropped him off, because there was nowhere else

for him to go. Deborah desperately searched for treatments and campaigned for better care. After Clive was finally established in a new special hospital, she fled to America to start her life over again. But she found she could never love another the way she loved Clive. Then Clive's memory unaccountably began to improve, ten years after the illness first struck. She returned to England. Today, although Clive still lives in care, and still has the worst case of amnesia in the world, he continues to improve. They renewed their marriage vows in 2002. This is the story of a life lived outside time, a story that questions and redefines the essence of what it means to be human. It is also the story of a marriage, of a bond that runs deeper than conscious thought.

The Craft of Research, 2nd edition Wayne C. Booth, Gregory G. Colomb, Joseph M. Williams, 2008-04-15 Since 1995, more than 150,000 students and researchers have turned to *The Craft of Research* for clear and helpful guidance on how to conduct research and report it effectively. Now, master teachers Wayne C. Booth, Gregory G. Colomb, and Joseph M. Williams present a completely revised and updated version of their classic handbook. Like its predecessor, this new edition reflects the way researchers actually work: in a complex circuit of thinking, writing, revising, and rethinking. It shows how each part of this process influences the others and how a successful research report is an orchestrated conversation between a researcher and a reader. Along with many other topics, *The Craft of Research* explains how to build an argument that motivates readers to accept a claim; how to anticipate the reservations of thoughtful yet critical readers and to respond to them appropriately; and how to create introductions and conclusions that answer that most demanding question, So what? Celebrated by reviewers for its logic and clarity, this popular book retains its five-part structure. Part 1 provides an orientation to the research process and begins the discussion of what motivates researchers and their readers. Part 2 focuses on finding a topic, planning the project, and locating appropriate sources. This section is brought up to date with new information on the role of the Internet in research, including how to find and evaluate sources, avoid their misuse, and test their reliability. Part 3 explains the art of making an argument and supporting it. The authors have extensively revised this section to present the structure of an argument in clearer and more accessible terms than in the first edition. New distinctions are made among reasons, evidence, and reports of evidence. The concepts of qualifications and rebuttals are recast as acknowledgment and response. Part 4 covers drafting and revising, and offers new information on the visual representation of data. Part 5 concludes the book with an updated discussion of the ethics of research, as well as an expanded bibliography that includes many electronic sources. The new edition retains the accessibility, insights, and directness that have made *The Craft of Research* an indispensable guide for anyone doing research, from students in high school through advanced graduate study to businesspeople and government employees. The authors demonstrate convincingly that researching and reporting skills can be learned and used by all who undertake research projects. New to

this edition: Extensive coverage of how to do research on the internet, including how to evaluate and test the reliability of sources  
New information on the visual representation of data  
Expanded bibliography with many electronic sources

Points of View in the Modern History of Psychology Claude E. Buxton, 2013-10-22 Points of View in the Modern History of Psychology is a collection of papers that presents each individual contributor's expert knowledge of history in the field of psychology. One paper examines Wilhelm Wundt's concept of psychology as the propaedeutic science surviving and inspiring a generation or more of psychologists. Another paper discusses the early sources and the basic conceptions of functionalism as used in America. John B. Watson proclaims behaviorism as a new discipline in psychology with defining features, such as an objective, deterministic, scientific, and experimental method that can be used in both human and animal studies. Lieberman (1979), Mackenzie (1977) Miller, Galanter, and Pribram (1960) oppose behaviorism on the grounds that it slights the purpose of psychology, and focuses more on methodology to the detriment of theory. One paper notes that the acceptance or influence that a point of view has is based in some ways on the range and clarity of its connections with experimental and observational reality. This collection can prove useful for psychologists, behavioral scientists, psychiatrists, psycho-analysts, students of psychology, philosophy or general history who are interested in the many viewpoints of psychology.
