Strengthening Forensic Science in the United States National Research Council,Division on Engineering and Physical Sciences,Committee on Applied and Theoretical Statistics,Policy and Global Affairs,Committee on Science, Technology, and Law,Committee on Identifying the Needs of the Forensic Sciences Community,2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Manual on Estimation of Probable Maximum Precipitation (PMP) World Meteorological Organization, 2009 The manual describes procedure for estimating the maximum probable precipitation and the maximum probable flood. This is the third revised version. The first and second editions of this manual were published in 1973 and 1986, respectively. The current edition keeps a majority of the content from the second edition. The Field Guide to Human Error Investigations Sidney Dekker, 2017-11-01 This title was first published in 2002: This field guide assesses two views of human error - the old view, in which human error becomes the cause of an incident or accident, or the new view, in which human error is merely a symptom of deeper trouble within the system. The two parts of this guide concentrate on each view, leading towards an appreciation of the new view, in which human error is the starting point of an investigation, rather than its conclusion. The second part of this guide focuses on the circumstances which unfold around people, which causes their assessments and actions to change accordingly. It shows how to reverse engineer human error, which, like any other component, needs to be put back together in a mishap investigation.

Mountain Weather Research and Forecasting Fotini K. Chow, Stephan F.J. De Wekker, Bradley J. Snyder, 2012-08-30 This book provides readers with a broad understanding of the fundamental principles driving atmospheric flow over complex terrain and provides historical context for recent developments and future direction for researchers and forecasters. The topics in this book are expanded from those presented at the Mountain Weather Workshop, which took place in Whistler, British Columbia, Canada, August 5-8, 2008. The inspiration for the workshop came from the American Meteorological Society (AMS) Mountain Meteorology Committee and was designed to bridge the gap between the research and forecasting communities by providing a forum for extended discussion and joint education. For academic researchers, this book provides some insight into issues important to the forecasting community. For the forecasting community, this book provides training on fundamentals of atmospheric processes over mountainous regions, which are notoriously difficult to predict. The book also

helps to provide a better understanding of current research and forecast challenges, including the latest contributions and advancements to the field. The book begins with an overview of mountain weather and forecasting challenges specific to complex terrain, followed by chapters that focus on diurnal mountain/valley flows that develop under calm conditions and dynamically-driven winds under strong forcing. The focus then shifts to other phenomena specific to mountain regions: Alpine foehn, boundary layer and air quality issues, orographic precipitation processes, and microphysics parameterizations. Having covered the major physical processes, the book shifts to observation and modelling techniques used in mountain regions, including model configuration and parameterizations such as turbulence, and model applications in operational forecasting. The book concludes with a discussion of the current state of research and forecasting in complex terrain, including a vision of how to bridge the gap in the future.

The Primary ICT & E-learning Co-ordinator's Manual James Wright, 2007-05-23 [This book is] absolutely wonderful. It will be my new Bible... I have used it loads already in preparation for my ICT Mark assessment. Taking on the role of ICT co-ordinator can be quite a daunting task but this step by step guide, breaking things down into manageable chunks will be very supportive. I love the blogging idea - the comments made by the characters are very realistic. This is just what new co-ordinators need, I wish I'd had this when I took over co-ordination of ICT! - Christine Beedham, Primary ICT adviser, Warrington Every primary school has the daunting task of embedding ICT and e-learning into their curriculum. This practical manual is the first part of a two volume set that together makes up a detailed two year training programme for primary ICT and e-learning co-ordinators. The books combine key strategies and information with a weblog discussion from a group of 'virtual' co-ordinators who share their problems, fears and successes over the two-year programme, based on the author's wide experience of working with new co-ordinators and experienced staff on training programmes and in general support.

Book 1 is designed specifically for co-ordinators new to the role who need starting points and broad support. It presents a structured training programme split over three terms, guiding co-ordinators through the key stages of developing and implementing ICT policy and practice, including: o auditing existing school systems o reviewing and revising the school policy for ICT o reviewing the ways in which ICT is used as a teaching and learning tool across the curriculum o examining methods for the management of technical support services o establishing a clear overview of standards in ICT, including a review of assessment procedures, moderating work, monitoring teaching and learning and creating E Portfolios. The books have a companion website, which will offer downloadable versions of the photocopiable sheets from the book, as well as links to other sources of help and advice.
