Something Like Happy Eva Woods, 2017-09-05 "A special book that will make you laugh through your tears with its heartfelt take on happiness and friendship." —Amy E. Reichert, author of *The Optimist's Guide to Letting Go* and *The Coincidence of Coconut Cake* Annie is stuck. In her boring job, with her irritating roommate, in a life no thirty-five-year-old would want. But deep down, she's still mourning the terrible loss that tore a hole through her perfect existence. Until she meets the eccentric Polly. Bright, bubbly, intrusive Polly is determined to wake her new friend up to life. Because if recent events have taught Polly anything, it's that your time is too short to waste a single day—which is why she wants Annie to join her on a mission... ONE HAPPY THING EACH DAY. ONE HUNDRED DAYS. But just as the daily challenge opens Annie up to the possibility of joy—and perhaps even love with the unlikeliest of men—it becomes clear that Polly is about to need her more than ever. And Annie will have to decide once and for all whether letting others in is a risk worth taking. Told with wry wit and boundless heart, *Something Like Happy* is an unforgettable tale of celebrating triumphs great and small, seizing the day, and always remembering to live in the moment.

MOLECULAR STRUCTURE AND SPECTROSCOPY, Second Edition ARULDHAS, G., 2007-06-09 Designed to serve as a textbook for postgraduate students of physics and chemistry, this second edition improves the clarity of treatment, extends the range of topics, and includes more worked examples with a view to providing all the material needed for a course in molecular spectroscopy—from first principles to the very useful spectral data that comprise figures, charts and tables. To improve the conceptual appreciation and to help students develop more positive and realistic impressions of spectroscopy, there are two new chapters—one on the spectra of atoms and the other on laser spectroscopy. The chapter on the spectra of atoms is a detailed account of the basic principles involved in molecular spectroscopy. The chapter on laser spectroscopy covers some new experimental techniques for the investigation of the structure of atoms and molecules. Additional sections on interstellar molecules, inversion vibration of ammonia molecule, fibre-coupled Raman spectrometer, Raman microscope, supersonic beams and jet-cooling have also been included. Besides worked-out examples, an abundance of review questions, and end-of-chapter problems with answers are included to aid students in testing their knowledge of the material contained in each chapter. Solutions manual containing the complete worked-out solutions to chapter-end problems is available for

instructors.

The Rating of Chess Players, Past and Present Arpad E. Elo, 2008 One of the most extraordinary books ever written about chess and chessplayers, this authoritative study goes well beyond a lucid explanation of how today's chessmasters and tournament players are rated. Twenty years' research and practice produce a wealth of thought-provoking and hitherto unpublished material on the nature and development of high-level talent: Just what constitutes an exceptional performance at the chessboard? Can you really profit from chess lessons? What is the lifetime pattern of Grandmaster development? Where are the masters born? Does your child have master potential? The step-by-step rating system exposition should enable any reader to become an expert on it. For some it may suggest fresh approaches to performance measurement and handicapping in bowling, bridge, golf and elsewhere. 43 charts, diagrams and maps supplement the text. How and why are chessmasters statistically remarkable? How much will your rating rise if you work with the devotion of a Steinitz? At what age should study begin? What toll does age take, and when does it begin? Development of the performance data, covering hundreds of years and thousands of players, has revealed a fresh and exciting version of chess history. One of the many tables identifies 500 all-time chess greats personal data and top lifetime performance ratings. Just what does government assistance do for chess? What is the Soviet secret? What can we learn from the Icelanders? Why did the small city of Plovdiv produce three

Grandmasters in only ten years? Who are the untitled dead? Did Euwe take the championship from Alekhine on a fluke? How would Fischer fare against Morphy in a ten-wins match? It was inevitable that this fascinating story be written, ' asserts FIDE President Max Euwe, who introduces the book and recognizes the major part played by ratings in today's burgeoning international activity. Although this is the definitive ratings work, with statistics alone sufficient to place it in every reference library, it was written by a gentle scientist for pleasurable reading -for the enjoyment of the truths, the questions, and the opportunities it reveals.
